

Brazil Power Fiber Optic Cable Laying Project

Preview

The programme is called Norte Conectado. It lays fibre-optic cable along the beds of Amazon rivers, rather than clearing forest to string it over land. Brazil's Amazon river fiber project is turning the region's waterways into the backbone of a digital network, and its neighbours want to plug in. An unprecedented engineering project is installing kilometers of submerged fiber-optic cables in a region marked by forests, floods, currents, and continental distances, connecting. Prysmian Group, world leader in the energy and telecom cable systems industry, announces that is all set to supply 770 km of submarine telecom cables for the Norte Conectado project awarded by RNP, Rede Nacional de Ensino e Pesquisa, a Brazilian Internet provider, connecting the city of Macapa to. China's ZTT International Submarine Cable & System has been hired as a cable supplier for the Brazilian government-sponsored Amazon river fiber project Norte Conectado. More specifically, ZTT has been awarded the contract for three stretches of the project, notes Subtel Forum. This. As a country with a long coastline, fibre - both terrestrial and submarine - forms a vital part of Brazil's connectivity mix, although there are actually more mobile connections than broadband ones at present. On the subsea side, Fortaleza is emerging as a subsea landing point thanks to its.

The projects - part of the IDB Group's Amazonia Forever program and the European Union's Global Gateway - will
