

Bronze medal for electrical distribution box

Article Overview

A bronze medal for electrical distribution can refer either to a historical award recognizing achievements in electricity distribution or to a modern high-efficiency distribution cabinet called a "Bronze Medal Box."

Historical Bronze Medals

In the early 20th century, companies involved in electricity distribution were sometimes awarded bronze medals to commemorate milestones or long-term service. For example, in France in 1907, the CPDE (Compagnie pour la Distribution d'Electricite) issued a bronze medal to mark 25 years of service in electricity distribution. These medals were typically made of bronze, weighed around 109 grams, and measured 64 mm in diameter, often engraved by notable artists of the time . Such medals were symbolic recognitions of technical achievement and contribution to the electrical industry.

Modern "Bronze Medal Box" Distribution Cabinets

In contemporary electrical engineering and data center applications, the term "Bronze Medal Box" refers to a high-efficiency electrical distribution cabinet. These cabinets are designed for metering and power distribution in data centers or commercial electrical systems. They are available as complete sets, often customizable, and are inspected for quality before delivery. The cabinets are named "Bronze Medal" to indicate a standard or tier of efficiency and reliability, rather than being an award . They are typically priced between US\$48 to \$118 depending on configuration and supplier.

Summary

- o Historical context: Bronze medals were awarded to electricity distribution companies for long-term service or technical achievements, such as the 1907 CPDE medal in France .
- o Modern context: "Bronze Medal Box" is a commercial product, a high-efficiency electrical distribution cabinet used in data centers and electrical installations, emphasizing quality and reliability . Understanding the context is important: if you are referring to a collectible or award, it relates to historical recognition; if you are referring to a product, it is a technical distribution cabinet for modern electrical systems.
