One of the primary advantages of blue cable trays is their ability to support color-coded cable management systems. By assigning specific colors to different types of cabling, organizations can improve identification and reduce the risk of errors during installation and maintenance. Proper cable color coding and labeling are essential for effective network management, reducing Mean Time to Repair (MTTR) during moves, adds, and changes. This guide explains how to follow TIA standards for optimal network performance, streamlined operations, and enhanced troubleshooting. Is there a way that I can change the colors of 3 different cable trays to 3 different colors that will still display when I export to navisworks? 06-30-2022 07:11 AM Hi. or you can change the color settings on Navisworks. Every foot of wire, every time.

Is there a way to change your cable tray to a different color? Currently in 3D it shows the cable tray as gray but i would

You would need to assign a material to the cable tray or create a selection set in
