

Article Overview

ZM cable trays in Europe typically range from EUR20 to EUR80 per 3-meter section, depending on size, load capacity, and finish.

Price Overview

European ZM cable trays, made from steel coated with zinc, aluminum, and magnesium, offer excellent corrosion resistance and are widely used in electrical, construction, and infrastructure projects . Light-duty 300mm wide, 3-meter ZM trays are commonly priced around EUR20-EUR40 per section, while larger or heavy-duty trays can reach EUR60-EUR80 or more per 3-meter length . Prices vary based on:

- o Tray width and height (50mm-1000mm width, 50mm-150mm height)
- o Load capacity (light, medium, or heavy duty)
- o Design type (solid, perforated, or wire mesh)
- o Additional finishes (powder coating or custom RAL colors)

Factors Affecting Cost

- o Material and Finish: ZM coating eliminates the need for post-galvanizing, reducing cost and lead time while providing superior corrosion protection compared to traditional galvanized steel .
- o Length and Customization: Standard lengths are 3 meters, but bespoke sizes or special perforation patterns can increase the price .
- o Accessories: Lids, couplers, brackets, and mounting hardware may add to the total cost .
- o Supplier and Location: Prices differ across European countries and distributors; UK suppliers like Unitrunk and Tamlex provide ZM trays in compliance with BS EN 10346 .

Supplier Options

- o Unitrunk: Offers a full ZM cable tray range with fast lead times and environmental benefits .
- o Tamlex: Supplies light-duty ZM trays with optional powder coating and bespoke designs .
- o Cabletray-Systems: Provides wire mesh and straight wire ZM trays with various dimensions and load capacities .
- o Etech Components: Offers ZM trays with reduced cost and improved corrosion resistance compared to traditional galvanized options .

Practical Considerations

- o ZM trays are suitable for solar, agricultural, construction, and electrical projects.

- o They provide dense protective films that cover cut edges and scratches, ensuring long-term durability .
- o Lead times are generally shorter than traditional galvanized trays due to the simplified manufacturing process . For precise pricing, it is recommended to contact local European distributors with your required dimensions, load rating, and finish specifications, as bulk orders and custom designs can significantly affect the final cost.
