

Article Overview

The CIF price for G.657A2 hollow-core fiber in India currently ranges around \$25-\$35 per kilometer, reflecting tight global supply and high demand.

Local Pricing in India

In India, G.657A2 fiber optic cable is available from suppliers like Shail Integrated at approximately INR7,000 per kilometer in Bengaluru . This price reflects domestic wholesale rates and may vary depending on order volume, supplier, and delivery terms.

Global Market Influence

The global market for G.657A2 fiber is experiencing high volatility and structural price increases. Spot prices from Chinese manufacturers are around \$25 per kilometer, with forecasts suggesting potential rises to \$35-\$38 per kilometer due to strong demand from AI data centers, FTTH rollouts, and drone applications . Supply constraints, including limited preform capacity and geopolitical factors, are driving these elevated prices .

CIF Price Estimation

The CIF price includes the product cost, shipping, and insurance. Considering current global spot prices (\$25-\$35/km) and typical shipping/insurance costs to India, the CIF price for G.657A2 fiber is likely in the range of INR2,200-INR3,000 per meter (or INR22,00,000-INR30,00,000 per kilometer), depending on the supplier, shipping method, and insurance coverage. Prices may fluctuate daily due to the "one price per day" market phenomenon .

Key Considerations

- o Lead times are currently extended due to high demand and limited production capacity.
- o Bulk orders may secure slightly lower CIF rates compared to spot purchases.
- o Market monitoring is essential, as prices can change rapidly with global supply-demand shifts. In summary, while domestic Indian suppliers quote around INR7,000/km, the imported CIF price is heavily influenced by global market conditions, and buyers should plan for \$25-\$35/km plus shipping and insurance when budgeting for procurement.
