In general, PDUs are mounted either vertically along the rack frame (often referred to as "0U" or "1U vertical" installation), or horizontally within the equipment mounting space (1U or 2U horizontal). Choosing the right installation location and orientation ensures optimal space utilization, better cable management, and long-term operational reliability. PDUs are typically installed inside equipment racks or cabinets, where they distribute electrical power to servers, switches, storage devices. The indoor distribution box of Chuanli adopts a modular design to achieve a space-saving installation layout. Check for proper IP/NEMA ratings and material quality. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1.8m). This is not intended to be a theoretical document, nor a technical catalogue, but, in addition to the latter, aims to be of help in the.
