According to application and functionality, explosion-proof electrical boxes are generally categorized as follows: Explosion-Proof Distribution Box: Used for power distribution and circuit protection, equipped with breakers or fuses. They prevent sparks, arcs, or high temperatures generated by internal electrical components from coming into contact with explosive gases or dust in the surrounding atmosphere. Blast-proof enclosures are protective devices designed to prevent the consequences of fires & explosions. Sparks or overloads can damage equipment and put people at risk. Downtime can also disrupt daily operations. Our control safety cabinet, socket, maintenance lighting, power supply switch, operation box.
