

Price of Vertical Fireproof Steel Cable Trays

Article Overview

Vertical fireproof steel cable trays typically range from \$50 to \$300 per meter, depending on material, fire rating, and supplier.

Factors Affecting Price

Material: Galvanized steel is generally less expensive, while stainless steel (304 or 316) suitable for harsh environments costs more due to corrosion resistance and durability . **Fireproof Rating:** Trays meeting ASTM E84 or equivalent fire standards, or incorporating intumescent fireproof coatings, command higher prices due to enhanced safety features . **Design and Load Capacity:** Ladder-type, perforated, or solid-bottom vertical trays vary in cost. Higher load ratings and larger dimensions increase the price . **Compliance and Certification:** Products certified to NEC, IEC 61537, or local building codes may be priced higher due to testing and quality assurance requirements . **Accessories and Customization:** Elbows, reducers, riser brackets, and powder-coated finishes add to the total cost. Custom lengths or colors can also increase pricing . **Supplier and Bulk Discounts:** Direct manufacturer purchases or bulk orders can reduce per-meter costs, while retail suppliers may charge more for smaller quantities .

Typical Price Range

- o Standard galvanized steel vertical trays: \$50-\$120 per meter
- o Fireproof or intumescent-coated trays: \$120-\$200 per meter
- o Stainless steel (304/316) fireproof trays: \$200-\$300 per meter

Recommendations

- o Request Quotes: Contact suppliers like Accio, CEF, or MEP solutions for exact pricing based on your project specifications .
- o Verify Fire Ratings: Ensure the tray meets required fireproof standards for your installation environment .
- o Consider Total Cost of Ownership: Factor in installation, maintenance, and lifespan, not just initial purchase price . By evaluating these factors, you can select a vertical fireproof steel cable tray that balances safety, durability, and cost-efficiency for your project.

Cable ladder trays have side rails with rungs to route and support cable. The rungs allow cable to enter and exit anywhere along the
