

Price of a standard electrical distribution box in Northern Europe

Article Overview

A standard electrical distribution box in Northern Europe typically costs between EUR30 and EUR150, depending on size, material, and protection rating.

Price Range and Factors

The cost of a distribution box varies based on several factors:

- o Number of modules: Smaller boxes (e.g., 9-12 modules) are generally priced around EUR30-EUR60, while larger boxes (18-24 modules) can range from EUR70-EUR150 .
- o Material: Plastic (ABS) boxes are more affordable, whereas metal or galvanized steel boxes with higher impact resistance and outdoor suitability are more expensive .
- o Protection rating: Indoor boxes with IP40 protection are cheaper, while outdoor boxes with IP65 or higher, offering dust and water resistance, cost more .
- o Mounting type: Surface-mounted boxes are usually less expensive than flush-mounted or specialized outdoor enclosures .

Examples from Suppliers

- o EuroBox offers flush-mounted plastic boxes with 12-18 modules for indoor use, typically priced in the EUR40-EUR80 range .
- o Cabledomatic lists ABS plastic surface-mounted boxes for 24 modules with IP40 protection, suitable for standard residential installations .
- o Ahlsell provides robust, weatherproof boxes for outdoor or construction use, with multiple socket options and IP44-IP65 protection, generally costing EUR100-EUR150 depending on configuration .

Additional Considerations

- o Accessories such as DIN rails, mounting kits, and transparent doors may slightly increase the total cost.
- o Prices can vary by country within Northern Europe due to VAT, shipping, and local supplier pricing.
- o For specialized applications (high current, industrial use, or high-impact resistance), expect prices above EUR150.

In summary, for a standard residential or commercial distribution box in Northern Europe, you can expect to pay EUR30-EUR150, with the exact price depending on size, material, protection rating, and mounting type .
