

Price of parallel installation of cable tray tees

Article Overview

The installation price of a parallel cable tray tee typically ranges from \$50 to \$300 per piece, depending on material, size, and duty rating.

Factors Affecting Price

o Material and Finish

- o Mild steel pre-galvanized (PG) is the standard and more affordable option.
- o Mild steel hot-dip galvanized (HDG) offers better corrosion resistance and slightly higher cost.
- o Stainless steel (grade 316L) is the most durable and expensive, ideal for harsh environments like chemical plants or coastal areas .

o Duty Rating and Size

- o Tees are available for light, medium, and heavy-duty systems.
- o Widths range from 50mm to 900mm, with larger or heavy-duty tees costing more due to increased material and structural requirements .

o Installation Complexity

- o Labor costs vary depending on the number of tees, support spacing, and accessibility.
- o Installation in industrial or high-ceiling areas may increase labor charges.
- o Additional accessories like covers, brackets, or supports can add to the total cost .

Typical Price Range

- o Light-duty mild steel tee: \$50-\$100 per piece
- o Medium-duty galvanized tee: \$100-\$200 per piece
- o Heavy-duty stainless steel tee: \$200-\$300 per piece

Cost Considerations

- o Using a slightly more expensive, durable material can reduce long-term maintenance and replacement costs.
- o Accurate budgeting should include both the material cost of the tee and installation labor, as labor can account for up to 50% of total installation expenses .
- o For large-scale projects, consider bulk pricing and potential discounts from suppliers. By evaluating material, size, duty rating, and installation complexity, project planners can estimate the total cost of parallel cable tray tee installation effectively.
