

Standard Dimensions of Household Distribution Boxes in North Macedonia

Article Overview

Household distribution boxes in North Macedonia typically range from 1-way to 36-ways, with dimensions varying according to the number of circuits and type of installation.

Typical Sizes and Configurations

Residential distribution boxes, also known as breaker panels or meter panels, are designed to house circuit breakers, bus bars, and wiring for home electrical systems. In North Macedonia, standard household boxes generally follow the Macedonian Standard (MKS), which may align with European (EN) or international (ISO/IEC) standards . Common configurations include:

- o 1-way to 12-way boxes: Small boxes for apartments or single-family homes, often measuring approximately 200-400 mm in height, 150-300 mm in width, and 80-150 mm in depth .
- o 12-way to 36-way boxes: Larger boxes for multi-circuit homes or small commercial buildings, with dimensions ranging from 400-800 mm in height, 300-600 mm in width, and 150-250 mm in depth .
- o Double meter panels: For multi-unit residences, allowing separate metering for each unit, typically larger to accommodate multiple breakers and meters .

Mounting and Installation

- o Indoor installation: Flush-mounted or surface-mounted boxes are common, with flush-mounted boxes integrated into walls for aesthetic purposes.
- o Outdoor installation: Weatherproof enclosures are used for external meter panels or distribution boxes, often rated IP44 or higher for protection against moisture and dust .
- o Material: Most household boxes are made of metal or high-quality plastic, providing durability and electrical insulation.

Number of Ways

The "ways" of a distribution box indicate the number of circuit breakers it can accommodate:

- o Small homes: 4-12 ways
- o Medium homes: 12-24 ways
- o Large homes or multi-unit buildings: 24-36 ways

Compliance and Standards

Standard Dimensions of Household Distribution Boxes in North Macedonia

North Macedonia's distribution boxes are manufactured according to MKS standards, which may reference European norms (MKS EN) for electrical safety, dimensions, and installation practices . This ensures compatibility with standard circuit breakers and adherence to safety regulations.

Summary

For household use in North Macedonia, distribution boxes are available in a wide range of sizes, typically 200-800 mm in height, 150-600 mm in width, and 80-250 mm in depth, depending on the number of circuits. Selection should consider the number of ways, indoor or outdoor installation, and compliance with MKS or EN standards to ensure safety and proper functionality .
