Load the fiber optic cable properly. Apply lubricant to reduce friction. Always opt for a fiber optic cable with a low friction coefficient (between the cable outer surface and the duct inner. The mere thought of fiber optic installation can set the heart racing! Picture this: a lightweight, flexible cable, capable of carrying vast amounts of data over long distances at lightning speed. Compressed air is injected in the duct inlet after few hundred meters of cable is pushed into the duct. The pushing force is.
