

UPS Dual Power Distribution Box

Preview

These devices are designed to offer seamless power distribution to multiple systems while enhancing flexibility and reducing downtime. PDUs deliver AC power from an uninterruptible power supply (UPS), a generator, or utility power source to servers, network/telecom equipment, and other devices. It is optimized with GGD fixed low-voltage switchgear. UPS distribution cabinets are divided into input and output power distribution. UPS input and output cabinet is a UPS power supply assorted product that tailor-made base on UPS features, mainly have UPS power input (including double electric input), the output for UPS load, Lightning protection, UPS manual bypass, input and output detection instruments, output instructions and. Picture yourself in a situation where your electricity suddenly cuts out--everything comes to a standstill, the system breaks down, and expenses begin to soar.

Combining up to 24 separately protected, ready-made circuits in an output distribution unit built into a parallel switch panel, the PDB eliminates the need to set up a sub-distribution system.
